

Just as new processes, or a new generation of products, mean a new design for PHE systems, so does a changed process or change in throughput necessitate redesign.

At Plough Engineering we've known all about it for over a generation. As an independent, we bring fresh thinking to the whole process with individually tailored packages for turnkey schemes, flash pasteurisation units, Cleaning-In-Place (CIP) and pilot plant. From blueprint to installation, no project is too small or too big, from individual heat exchangers to fully automated skid mounted packages. New or old, we have the expertise to make it perform.

DESIGN & REDESIGN

- **Innovative, comprehensive design/redesign solutions**
- **Comprehensive industry know-how to guarantee compatibility**
- **Product protection from contamination with tertiary systems and low pressure attenuation circuits**
- **Provision of self contained service units when cooling and heating is not available**
